

A healthy working environment for everyone

The Chartered Society for
Worker Health Protection

www.bohs.org

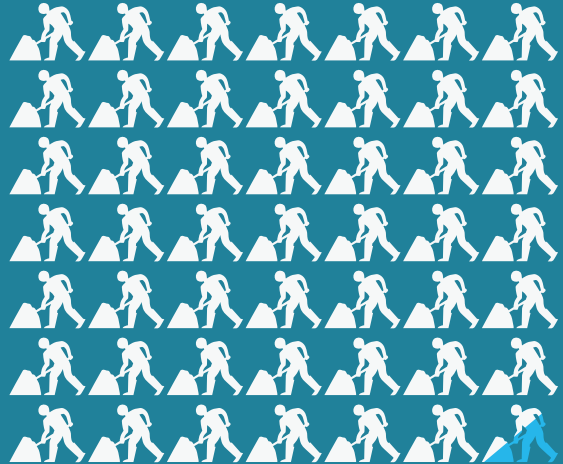

Every year in the UK
99% of work related
deaths are caused
by **occupational
diseases**, not by
accidents!

These are caused by exposure to hazards such as dusts, chemicals, fumes and gases - asbestos, silica, pesticides and parabens are just some of the hazards which can be harmful to health.

From construction workers to teachers,
bakers to engineers – anyone could be affected.

99% health

Approx 13,000 died from work related disease

1% safety

142 workers died in accidents at work
